cover letter

A “frontend unicorn” with ++i years of experience, the glue between the frontend, UX, and the graphical design. I'm not from the arts academy but I feel it in my stomach if something is not right with the color palette (and when a space is missing between words!) My core competency lies in the fine details and the code quality under the hood: semantic, accessible, and SEO friendly markup with WCAG compliance. I think before I code.
